

WingEater[®]

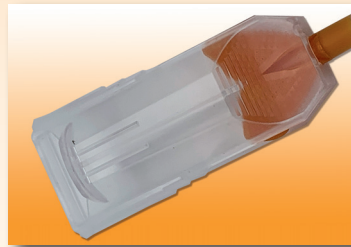

The JMS WingEater[®] provides superior protection for the prevention of needle stick injuries. The seamless needle guard eliminates the risk of the needle protruding from the side of the guard while the side locking mechanism eliminates the potential for reactivation.

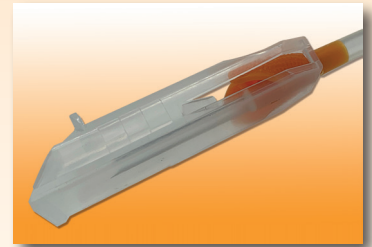

Multiple retraction methods provide flexibility for various access locations and patient comfort.

Soft and flexible easy to grip wings allow for better control.

Seamless guard ensures the needle is fully enclosed. The needle cannot protrude from the sides of the guard.

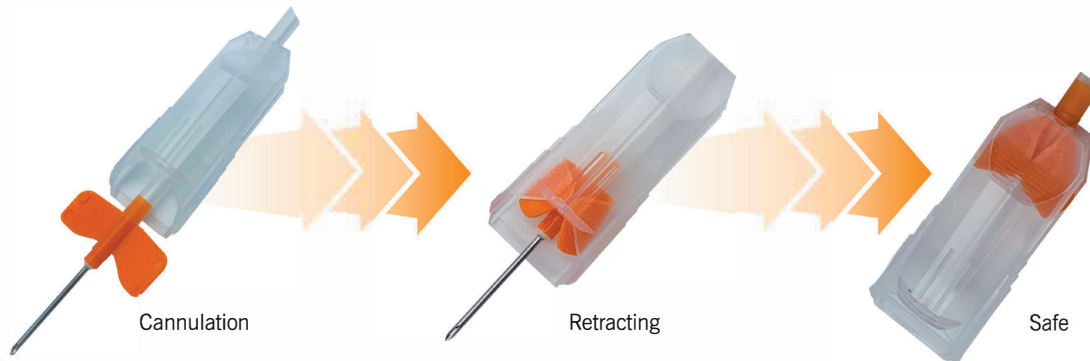

Side teeth provide a positive locking mechanism preventing reactivation.
